## प्रस्तावना

हा अहवाल राष्ट्रीय नमुना पाहणीच्या ५९ व्या फेरीतील पत्रक १.० (जानेवारी-डिसेंबर, २००३) मधील 'कुटुंबाचा उपभोग्य बाबींवरील खर्च' या विषयावरील राज्य नमुन्यात गोळा करण्यात आलेल्या माहितीवर आधारित आहे. राज्याच्या ग्रामीण व नागरी भागातील लोकांचे राहणीमान व रोजगार आणि बेरोजगार स्थितीचे मूल्यांकन करणे हा या अहवालाचा उद्देश आहे.

मुंबई.

## **PREFACE**

This report is based on data collected in the State sample in schedule 1.0 of 59th round(Jan-Dec 2003) of the National Sample Survey on the subject “Household Consumer Expenditure”. The objective of this report is to judge the Living Status of the population and Employment & Unemployment situation in rural and urban areas of the State.

# Chapter - One

## INTRODUCTION

1.0 Beginning from the first round (1950-51) of the National Sample Survey (NSS), data on household consumer expenditure were collected in every round up to the 28th (1973-74). After the 26th round of the survey, the Governing Council of NSSO decided that the surveys on consumer expenditure and employment situation might be undertaken together on a large scale once in every five years. Accordingly, "quinquennial" surveys on consumer expenditure and employment were conducted in the 27th, 32nd, 38th, 43rd, 50th and 55th rounds of NSS, at roughly 5 year intervals. In these rounds both survey schedules - Sch.1.0 dealing with household consumer expenditure and Sch.10 with employment-unemployment were canvassed. For some years, the two schedules were canvassed in the same sample households, that is, households interviewed for Sch.1.0 were also interviewed during the same visit for Sch.10. From the 55th round (1999-2000) onwards, this linking was withdrawn to avoid a very long interview.

1.1 **Annual series:** The need for an annual series of data on consumer expenditure was also felt in the mid-80's by planners and research workers. The Governing Council therefore decided, one, that the quinquennial consumer expenditure-cum-employment surveys would be carried on as before, and, two, that every other round of NSS, starting from the 42nd (1986-87), would include a consumer expenditure enquiry with 2 (increased to 4 from 1993 onwards) sample households per sample village/block with a slightly abridged version of Sch.1.0. From the 45th round, it was decided to extend the scope of this "annual" survey on consumer expenditure enquiry on a reduced scale by introducing some important questions on activity status of household members in Sch.1.0 so as to be able to generate some indicators on employment and unemployment as well.

In each round since the 42nd, the duration of field investigation has been one year except for the 47th, 49th, 54th and 58th rounds, which were of six month's duration. The Government of Maharashtra participates in these rounds on a matching sample basis independently.

1.2 The present report gives the results of the 59th round survey (Jan.-Dec., 2003) on consumer expenditure and employment-unemployment, the fifteenth survey of the "annual" series. In the 59th round of NSS, Sch.1.0 was canvassed in 4 sample households per sample village/block. Besides, Schedule 1.0, the following schedules of enquiry were also canvassed: Land and Livestock Holdings, Debt and Investment, and Situation Assessment Survey of Farmers.

1.3 **Geographical coverage:** The geographical coverage of the survey was entire rural and urban areas of the State.

1.4 The field work of the 59th round survey was carried out during the period January to December, 2003. Each sample FSU was visited twice during this round. Thus, period of the first visit was January-August, 2003 and that of the second visit was September-December, 2003. Of the four households selected for sch.1.0, two were canvassed in the first visit and remaining two in the second visit.

1.5 **Sample size:** The information was collected from 2,089 households spread over 523 villages and 2,106 households spread over 531 urban blocks.

1.6 The present report contains detailed tables separately for rural and urban areas of the State which are given in Appendix-1. Chapter-2 is on concepts and definitions. Sample design and estimation procedure is given in

chapter 3. Chapter 4 deals with main findings of the enquiry of consumer expenditure. Comparative picture in respect of the important characteristics of Central and State sample estimates is given in Chapter-5. Chapter-6 is based on the comparative picture regarding some important characteristics based on the State sample results of the earlier NSS rounds. Employment and unemployment situation is given in Chapter-7.

## Chapter - Two

### CONCEPTS AND DEFINITIONS

**2.0 Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. The word “normally” means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host’s household. “Living together” is usually given more importance than “sharing food from a common kitchen” in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person’s family members is taken to include the person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc. is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments.

**2.1 Adult:** A person who has completed 15 years of age.

**2.2 Household size:** The size of a household is the total number of persons in the household.

**2.3 Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household’s consumer expenditure. Household consumer expenditure is the total of the monetary values of consumption of various groups of items, namely (i) food, pan (betel leaves), tobacco, intoxicants and fuel

& light, (ii) clothing and footwear and (iii) miscellaneous goods and services and durable articles.

**2.4** For groups (i) and (ii), the total value of consumption is derived by aggregating the monetary value of goods actually consumed during the reference period. An item of clothing and footwear would be considered to have been consumed if it is brought into maiden or first use during the reference period. The consumption may be out of (a) purchases made during the reference period or earlier; (b) home grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex-farm or ex-factory rate. For evaluating the consumption of the items of group, (iii) i.e., items categorised as miscellaneous goods and services and durable articles, a different approach is followed. In this case, the expenditure made during the reference period for the purchase or acquisition of goods and services is considered as consumption.

**2.5** It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests during ceremonies or otherwise. To avoid double counting, transfer payments like charity, loan advance, etc. made by the household are not considered as consumption for items of groups (i) and (ii), since transfer receipts of these items have been taken into account. However, the item “cooked meals” is an exception to the rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical

difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests and employees are also recorded in the purchaser household.

2.6 This procedure of recording cooked meals served to others in the expenditure of the serving households only leads to bias-free estimates of average per capita consumption as well as total consumer expenditure. However, donors of free cooked meals are likely to be concentrated at the upper end of the per capita expenditure range and the proportion of recipients at the lower end. Consequently, the derived nutrition intakes may get inflated for the rich (net donors) and understated for the poor (net recipients). This point has to be kept in mind while interpreting the NSS consumer expenditure data for any studies relating to the nutritional status of households.

2.7 **Value of consumption:** Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex-farm or ex-factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.8 **Monthly per capita consumer expenditure (MPCE):** For a household, this is its total consumer expenditure divided by its size and expressed on a per month (30 days) basis. A person's MPCE is understood as that of the household to which he or she belongs.

2.9 **Reference period:** The reference periods used for collection of consumption data for different groups of items are given below:  
education, medical care last 365 days (institutional), clothing, footwear and durable goods  
all other items, viz., last 30 days  
food, pan, tobacco and intoxicants, fuel & light, miscellaneous goods & services, and medical care (non-institutional)

2.10 **Milk and milk products:** This includes ghee, butter, curd, ice-cream etc. Milk-based sweetmeats (pera, rasogolla etc.) come under items "prepared sweets". However, if these are prepared from milk, sugar, etc. within the household and consumed, then the consumption of ingredients are accounted separately instead of the entire consumption being accounted under "milk products".

2.11 **Clothing and footwear:** This category includes bedsheets, bedcovers, pillows, curtains, mattresses, blankets, rugs, mats and mattings, cotton yarn, wool, and knitting wool. It, however, excludes tailoring charges, which come under "miscellaneous goods and services".

2.12 **Durable goods:** Items included here are distinguished from other miscellaneous goods by having a longer expected lifetime of use (roughly, one year or more). Expenditure incurred on repairs, and purchase and construction of durables used for domestic purpose is included in "expenditure on durable goods".

2.13 **Miscellaneous goods and services:** This is a residual group containing items other than food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, rent, taxes and durable goods.

**2.14 Katcha:** A katcha structure is one whose walls and roof are made of katcha materials, which means materials such as mud, bamboo, grass, leaves, reeds, thatch or unburnt bricks, etc.

**2.15 Pucca:** A pucca structure is one whose walls and roof are made of pucca materials which means materials such as burnt bricks, stone, cement, concrete, jackboard (cement-plastered reeds) and timber. Tiles, galvanised tin or asbestos cement sheets used in construction of roofs are also regarded as pucca materials.

**2.16 Semi-pucca:** A semi-pucca structure is one of which either the roof or the walls but not both is made of pucca materials like burnt bricks, stone, cement, concrete or timber.

**2.17 Independent house:** An independent house is one which has a separate structure and entrance with self-contained arrangements. In other words, if the dwelling unit and the entire structure of the house are physically the same, it is considered as an independent house. Here dwelling unit means living rooms, kitchen, bathroom, latrine, store-room and verandah (both open and closed).

**2.18 Flat:** A flat, generally, is a part of a building and has one or more rooms with self-contained arrangements and normal housing facilities like water supply, latrine, toilet etc., which are used exclusively by the family residing therein or jointly with other families. It also includes detached room or rooms which may or may not have other housing facilities.

**2.19 Economic activity:** Economic activity is any activity that results in production of goods and services that adds value to national product. Such activities include production of all

goods and services for market, i.e., production for pay or profit and production of primary commodities for own consumption and own-account production of fixed assets, among the non-market activities.

**2.20 Usual activity status :** In the usual status approach, the status of activity on which a person spent a relatively longer time of the reference period of 365 days preceding the date of interview is first considered for deciding the principal usual activity status of the person. The activities pursued by a person are grouped into three broad categories: (i) working or employed, (ii) seeking or available for work, i.e., unemployed, and (iii) not in labour force. A two-stage dichotomous classification is applied for classification according to usual status approach. The procedure involves a classification into 'labour force' and 'out of labour force' in the first stage and thereafter the labour force into 'employed' and 'unemployed' in the second stage. Within the broad principal usual status category identified for a person, detailed principal status is assigned on the basis of the relative duration of time spent on different activities. A person categorised as a 'worker' or 'employed' on the basis of his principal status is referred to as principal status worker. A 'non-worker' (on the basis of the principal usual activity status) who pursued some economic activity in a subsidiary capacity was considered to be usually working in a subsidiary capacity and is referred to as 'subsidiary status worker'. These two groups, viz. 'principal status workers' and 'subsidiary status workers', together constituted 'all workers' according to the usual status classification. These concepts are identical to those adopted from the NSS 50th round survey onwards for classification of population according to the usual status.

**2.21 Current weekly activity status:** For classification of persons according to current weekly status, they had to be initially assigned a unique activity status with reference to a period of 7 days preceding the date of the interview. This posed no problem in the case of persons having only one status during the reference week. However, a unique status was assigned to persons pursuing more than one activity during the week by adopting a priority-cum-major-time rule. For assigning broad activity category (status), the status of 'working' got priority over the status of 'not working but seeking/available for work' and the status of 'seeking/available for work' got priority over the status of 'not working and not seeking/not available for work'. But within the broad category of 'working' or 'not working', the detailed activity category was assigned by major time criterion, i.e., the activity in which a major part of time was spent was considered the current weekly activity. More specifically, a person was considered 'working' (or employed) if he/she was engaged in any one or more of the economic activities (11 to 72) for at least one hour on any one day of the reference week. Further, he/she was assigned that economic activity category (11 to 72) in which he/she spent major share of the working time during the reference week. A person who had not worked for even one hour on any one day of the week, but has been seeking work or has been available for work (although not seeking) at any time during the week was considered 'seeking/available for work' (or unemployed). Others were considered 'not available for work' (or not in the labour force). Each member of the sample household was, thus, assigned a unique current weekly activity status for the week. Aggregates of persons under different activity statuses, thus assigned, provided the distribution of persons by current weekly activity during an average week of the survey period. Here it may be mentioned that in the quinquennial rounds, the current weekly activity status is derived from the time disposition of members on various activities on each day during the 7 days preceding the date of survey, while in the annual rounds the current weekly activity status is determined directly.

## Chapter - Three

### SAMPLE DESIGN AND ESTIMATION PROCEDURE

**3.1 Sample design:** A stratified multi-stage design was adopted for the 59th round survey. The first stage unit (fsu) was the census village in the rural sector and the UFS block in the urban sector. Households formed the ultimate stage whenever they were formed in the selected fsu.

**3.2 Sampling frame for first-stage units:** For rural areas, the list of villages as per Population Census 1991 was used as sampling frame. For urban areas the latest UFS frame was used. For stratification of towns by size class, provisional populations of towns as per Census 2001 were used.

#### **3.3 Stratification in rural area:**

Two **special strata** were formed at the State level :

Stratum 1: all fsu's with population between 0 to 50, and

Stratum 2: fus's with population more than 15,000

The special stratum 1 was formed whenever at least 50 such fsu's were found in a State. Similarly, special stratum 2 was formed if at least 4 such fsu's were found in a State. Otherwise, such fsu's were merged with the general strata.

From fsu's other than those covered under special strata 1 & 2, general strata were formed, with their numbering starting from 3 onwards. Each district of a State was normally treated as a separate stratum. However, if the census rural population of the district was greater than or equal to 2 million as per Population Census 1991 or 2.5 million as per Population Census 2001, the district was split into two or more strata by grouping contiguous tehsils.

**3.4 Stratification in urban area:** In the urban sector, strata were formed within each NSS region on the basis of size class of towns as per Population Census 2001. The stratum numbers and their composition (within each region) are given below.

stratum 1: all towns with population less than 50,000

stratum 2: all towns with population 50,000 or more but less than 2 lakhs

stratum 3: all towns with population 2 lakhs or more but less than 10 lakhs

stratum 4,5,6: each city with population 10 lakhs or more

The stratum numbers remained as above even if, in some regions, some of the strata did not exist.

#### **3.5 Allocation of State level sample to Rural and Urban sectors:**

State level sample size was allocated between the rural and urban sectors in proportion to provisional population as per Census 2001 with 1.5 weightage to urban sector subject to the restriction that urban sample size would not exceed the rural sample size.

**3.6 Allocation to strata:** Within each sector of a State, the sample size was allocated to the different strata in proportion to the stratum population as per Census 2001. Allocations at stratum level were adjusted to a multiple of 2 with a minimum sample size of 2. However, a multiple of 4 fus's was allocated to a stratum wherever possible.

**3.7 Selection of fsu's:** In all the rural strata except for stratum 1, fsu's were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population as

per Population Census 1991. In stratum 1 of the rural sector and in all the strata of the urban sector, selection was done using Simple Random Sampling Without Replacement (SRSWOR). Samples were drawn in the form of two independent sub-samples in both rural and urban sectors.

### 3.8 Selection of hamlet-groups, sub-blocks and households

Large villages / blocks having approximate present population 1200 or more were divided into a suitable number of hamlet-groups / sub-blocks as given below:

approximate present population of sample village/block	no. of hamlet-groups/sub-blocks formed
less than 1200	1 (no h-g/s-b formation)
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
...and so on	

Hamlet-groups/sub-blocks were formed by more or less equalising population. Two hamlet-groups/sub-blocks were selected from a large village or block by SPSWOR. Listing and selection of the households was done independently in the two-selected hamlet-groups/sub-blocks so formed.

### 3.9 Formation of second-stage strata (SSS)

**Rural:** From the data of NSS 48th round, households having land area 0.005 hectares or more were identified. The area of land, Y, was determined for each State, such that 80% of the households possessed land less than Y.

**Urban:** Using NSS 55th round data, a value C of MPCE was determined at State level such that 90% of the households in the State had MPCE less than C.

Two second-stage strata were formed in each fsu as shown below:

#### Rural:

SSS 1: households possessing land < Y  
SSS 2: households possessing land  $\geq$  Y

#### Urban :

SSS 1: households with MPCE < C  
SSS 2: households with MPCE  $\geq$  C

### 3.10 Allocation and selection of sample households:

Two households were selected from each second-stage stratum. In case of hamlet group/sub-block formation, one household was selected from each SSS of each hamlet group/sub-block. Sample households were selected by SRSWOR in each SSS of each h-g/s-b. Out of the four households thus selected, two households were covered in visit 1 and two in visit 2.

### 3.11 Estimation Procedure Notations:

s = subscript for stratum  
m = subscript for sub-sample (m=1,2)  
i = subscript for fsu [village (panchayat ward)/block]  
d = subscript for a hamlet-group/sub-block (d= 1,2)  
j = subscript for second stage stratum of an fsu/h-g/s-b  
k = subscript for k-th sample household under a particular second stage stratum within an fsu/h-g/s-b  
D = total number of h-g's/s-b's formed in the sample village/block  
D\* = 1 if D = 1  
= D÷2 for fsu's with D > 1  
N = total number of fsu's in rural stratum 1 or in any urban stratum  
Z = total size of a rural stratum other than stratum 1 (= sum of sizes for all the fsu's of a rural stratum other than stratum 1)  
z = size of sample village used for selection

n = number of sample village/block surveyed including zero cases but excluding casualty for a particular sub-sample and stratum  
H = total number of households listed in a second-stage stratum of a h-g/s-b of the sample fsu  
h = number of households surveyed in a second-stage stratum of a h-g/s-b of the sample fsu  
x,y = observed value of characteristics x,y under estimation  
 $\hat{X}, \hat{Y}$  = estimate of population total X,Y for the characteristics x,y  
In terms of the above symbols,

$y_{smidjk}$  = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th h-g/s-b (d = 1, 2) of the i-th fsu belonging to the m-th sub-sample for the s-th stratum;

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

### 3.12 Formulae for estimation of aggregates for a particular sub-sample and stratum in rural / urban sector:

#### Rural:

(a) Estimation formula for stratum 1:

(i) For households selected in j-th second stage stratum (j = 1,2):

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{1j}}{h_{1j}} \sum_{k=1}^{h_{1j}} y_{i1jk} + \frac{H_{2j}}{h_{2j}} \sum_{k=1}^{h_{2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(b) Estimation formula for other strata:

(i) For households selected in j-th second stage stratum (j = 1, 2):

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} D_i^* \left[ \frac{H_{1j}}{h_{1j}} \sum_{k=1}^{h_{1j}} y_{i1jk} + \frac{H_{2j}}{h_{2j}} \sum_{k=1}^{h_{2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

**Urban:**

(a) Estimation formula for a stratum:

(i) For households selected in j-th second-stage stratum (j= 1, 2)

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} D_i^* \left[ \frac{H_{1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + \frac{H_{2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all selected households:

$$\hat{Y} = \sum_j \hat{Y}_j$$

**3.13 Overall Estimate for Aggregates:**

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples is obtained as :

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

**3.14 Overall estimate of aggregates at State level:**

The overall estimate  $\hat{Y}$  at the State level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State.

3.15 Estimates of Ratios: Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimate of the aggregates  $Y$  and  $X$  for two characteristics  $y$  and  $x$  respectively at the State level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) is obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

## Chapter - Four SUMMARY OF FINDINGS

4.0 Some of the important findings of the present survey for the subject "Household consumer expenditure" are given in the following paragraphs.

4.1 The percentage distribution of households and persons according to monthly per capita expenditure classes

for rural and urban areas of the State are given in Table No.4.1. It is observed from the table that the average monthly per capita expenditure for rural and urban areas was Rs.593.31 and Rs.1122.94 respectively. In rural areas about 63 per cent of the persons and about 56 per cent of the households had their

दरडोई मासिक खर्च(रु.)/MPCE(Rs.0.00)	1122.94	-	-

monthly per capita expenditure (MPCE) below the respective average expenditure, while in urban areas about 65 per cent of the persons and about 53 per cent of the households had their MPCE below the respective average expenditure. The average household size in the rural and urban areas was 4.71 and 4.41 respectively. In both the areas the average household size goes on decreasing as the MPCE level increases except the lowest class in the rural areas.

4.2 The value (Rs.0.00) of consumption by broad groups of items per person for a period of 30 days for rural and urban areas of the State is given in Table No.4.2. It is observed from the table that the monthly per capita expenditure for the State was Rs.797.44. The monthly per capita expenditure on food for the State was Rs.361.70. For rural and urban areas, it was Rs. 297.49 and Rs.464.08 respectively. The monthly per capita expenditure on non-food items

for the State was Rs.435.74. For rural and urban areas it was Rs. 295.82 and Rs.658.86 respectively.

4.3 The percentage distribution of monthly per capita expenditure by broad groups of items for rural and urban and for the State is given in Table No.4.3. For the State, out of the total monthly per capita expenditure, 45 per cent expenditure was on food items, while 55

per cent expenditure was on non-food items. The corresponding figures for rural areas were 50 per cent both on food and non-food items. For urban areas these percentages were 41 and 59 respectively. Further, it is observed that the maximum share of total monthly per capita expenditure was on cereals, vegetables, edible oil and milk and milk products. while in urban areas it was on cereals, beverages and refreshment,

milk and milk products and vegetables. expenditure on food items in rural areas As far as non-food items are concerned, was found to be more than that in urban the maximum share to total consumer areas. While for non-food items, the expenditure was on miscellaneous goods percentage expenditure was found to be and services in both rural and urban less in rural areas as compared to that areas of the State. The percentage of in urban areas.

wheat was the major item of consumption. The per person quantity of consumption of wheat was 3.32 kg. and 4.47 kg. in the rural and urban areas respectively. The value of such consumption in rural and urban areas was found to be Rs.27.44 and Rs.47.34 respectively. The consumption of total cereals in the quantitative terms was higher in the rural areas than in urban areas.

4.5 The percentage of expenditure on cereals to total consumer expenditure and percentage distribution of quantity of cereals consumed per person for a

period of 30 days by items of cereals for rural and urban areas is given in Table No.4.5. It is observed from the table that the percentage of expenditure on cereals out of total consumer expenditure was found to be 14 per cent in rural areas and 9 per cent in urban areas. Rice was the major item of consumption in terms of percentage of expenditure in rural areas and the corresponding percentage was 5 per cent. However, in urban areas, the major item of consumption was wheat with the percentage of expenditure on it being 4.

4.6 Table No.4.6 gives the average price per kilogram of different cereals as derived from value and quantity figures of consumption. No information was collected on the prices of items of cereals directly in the consumer expenditure survey. The implicit prices of different cereals have been derived on the basis of quantity and value of consumption of an item. The consumption may be out of home grown stock, purchase, receipt in exchange of goods and services and/or quantity received as gift, charities, loans, free collection etc. The consumption which is made out of home grown stock is evaluated at ex-farm

price while the remaining part is derived at the local retail price. Thus the implicit price of NSS consumption data in the rural areas is a mixture of ex-farm and retail prices. It is revealed from the table that rice was the costliest and bajra was the cheapest cereal item in both rural and urban areas. The prices in the urban areas were higher as compared to the prices in the rural areas. These prices in the urban areas were 16 to 30 per cent higher as compared to the prices in the rural areas. The average price per kilogram of all cereals, in the urban areas was higher by around 36 per cent of the price in the rural areas.

## Chapter - Five

### COMPARATIVE PICTURE IN RESPECT OF SOME OF THE IMPORTANT CHARACTERISTICS OF CENTRAL & STATE SAMPLE ESTIMATES

5.0 The State participates in the National Sample Survey Programmes on a matching sample basis. An independent matching sample was drawn for the State for which all steps viz-field work, tabulation etc, were carried out independently. An independent set of results is, therefore, available for the State sample. The results from two independent samples namely State & Central Samples, helps not only in increasing the precision of the results by way of combining them but the difference

between the two estimates also gives an idea about the magnitude of the error, due to the sampling of the enquiry. The following para gives comparison for some important characteristics of the household consumer expenditure.

5.1 The average number of persons per households according to State and Central sample is given in the Table No.5.1. It is observed that the estimated average household size coincides with the Central sample estimates in both the areas.

तक्ता क्रमांक/ Table No.5.1

प्रती कुटुंब व्यक्तीची सरासरी संख्या

Average number of persons per household

क्षेत्र/Area	कुटुंबाचा सरासरी आकार/Average household size	
	केंद्र/Central	राज्य/State
(1)	(2)	(3)
ग्रामीण/Rural	4.8	4.7
नागरी/Urban	4.4	4.4

5.2 Value (Rs.0.00) of consumption of food and non-food and total expenditure per person for a period of 30 days for both the State & Central sample are given in Table No. 5.2. It is seen from the table that the State sample estimates

are slightly on higher side than the Central sample estimates in rural areas while in urban areas the Central sample estimates are slightly on higher side than the State sample estimates.

तक्ता क्रमांक/ Table No.5.2

## Chapter - Six

### COMPARATIVE PICTURE OF SOME IMPORTANT CHARACTERISTICS BASED ON NSS 59TH ROUND SURVEY & EARLIER SURVEYS

6.0 The enquiry of household consumer expenditure was conducted in earlier rounds viz. 27th, 32nd, 38th, 42nd to 59th rounds. Amongst these rounds, 27th, 32nd, 38th, 43rd, 50th & 55th rounds surveys were quinquennial in nature with a large sample size and rest of the survey rounds were having a thin sample. However, in this chapter comparisons of estimates generated from 56th to 59th round are discussed.

6.1 Table No. 6.1 gives the average number of persons per household in rural and urban areas. The average household size in rural areas has increased to 4.7 from 4.5 during the 56th round to the 59th round survey. In case of urban areas it has remained 4.4 with sharp decline in 57th round & then gradually increased to the 56th round level average.

तक्ता क्रमांक/ Table No.6.1

ग्रामीण व नागरी भागातील प्रती कुटुंब व्यक्तींची सरासरी संख्या

Average number of persons per household in rural and urban areas

ग्रामीण/Rural	593	554	524	573
नागरी/Urban	1123	1069	1073	1042

6.3 The monthly per capita quantity and value of consumption of cereals in rural and urban areas are given in Table No.6.3. It is observed that the quantity of consumption of cereals per person

for a period of 30 days shows minor fluctuations in both the areas of the State resulting in varying trend in value of consumption from 56th round to 59th round.

तक्ता क्रमांक/Table No.6.3

6.6 The household MPCE is shown for three quinquennial consumer expenditure surveys of NSS (43rd, 50th and 55th rounds) alongwith the 56th, 57th, 58th and 59th rounds of NSS in Table No. 6.6. Apart from average MPCE at current prices, indexes of average MPCE using the 43rd round figures as base (=100). The corresponding consumer prices indices (CPI for agricultural workers for rural areas and CPI for non-manual employees for urban areas) again with 1987-88 as base are shown. It is observed from the table that rural MPCE in money

terms has increased to 375 in this round from 100 in 1987-88 (43rd round). Consumer prices in rural areas have increased during the same period from 100 to 328 (index value). This indicates a rise in real consumption expenditure of the order of 14%. In urban Maharashtra, the index of average MPCE in money terms rose from 100 in 1987-88 to 386 in 2003, indicating a real increase of 17% with the consumer price index having increase from 100 to 333 over the same period.

## Chapter - Seven

### EMPLOYMENT AND UNEMPLOYMENT SITUATION

7.0 Some of the important findings of the present survey for the subject "Employment and Unemployment" are given in this chapter. The results of this survey are also compared with the earlier annual series rounds, so as to study the trend in employment and unemployment.

7.1 Percentage of employed persons according to usual status and current weekly status are given in Table No.7.1. It is seen from the table that Worker Population Ratio (WPR) has increased to

57 per cent since July, 2000 to December, 2003 for males in the rural areas and to 55 per cent for males in the urban areas of the State. Varying trend is observed in WPR for females from 56th to 59th round. Further, in rural areas for males the current weekly estimates of WPRs show increasing trend while in rural areas for females & in urban areas for both males and females the current weekly status estimates of WPRs show a varying trend.

7.2 Persons employed are categorized into three broad groups according to their status of employment. These groups are i)Self employed ii)regular employees and iii)casual labour. The percentage distribution of the usually employed by category of employment is given in Table No.7.2.The basic distribution of employed in terms of employment shows that about

half of the employed in the rural areas were in the Self employed category. The percentage of regular employees was about 10 for males and 3 for females in rural areas. The proportion of the self employed was higher among rural males as compared to the urban males in every round.

7.3 Two different estimates are obtained from the annual survey data for the unemployed viz.i) number of persons unemployed based on the usual status classification and ii) number of persons unemployed based on weekly status classification. The first estimate relates to persons unemployed for a relatively longer period during the reference period of 365 days and approximates to an indicator of the chronic unemployment. Two estimates of the usually unemployed are presented, namely, usually unemployed in terms of their principal status (ps) and usually unemployed excluding the subsidiary status workers (usual adjusted).Some of the unemployed identified on the basis of principal status might be working in

a subsidiary capacity. Hence, the unemployment rate derived on the basis of adjusted usual status is expected to be lower than that based on principal status. The other estimates,i.e.the one based on current weekly status given the average weekly picture of unemployment during the survey year and covers both chronic unemployment and intermittent unemployment caused by seasonal fluctuation in the employment of those categorised as usually employed. Unemployment rates (Number of persons unemployed per thousand persons in the labour force) are given in Table No.7.3. It is seen that the unemployment rates were higher in the urban areas than in the rural areas.

तक्ता क्रमांक/Table No.7.3

श्रमशक्तीतील बेरोजगारीत व्यक्तींचे (बेरोजगारीत व्यक्तींची दर हजारी संख्या) दर

7.4 The percentage distribution of the rural and urban areas remains same i.e. usually unemployed (ps+ss) by their broad employed in current weekly status. For current weekly status is given in Table females significantly large proportion No.7.4. It is observed that the status goes out of labour force in current of usually employed males in both the weekly status.

तक्ता क्रमांक/ Table No.7.4

**राष्ट्रीय नमुना पाहणीच्या ५९ व्या फेरीतील (जानेवारी-डिसेंबर, २००३) पत्रक १.० मधील “कुटुंबाचा उपभोग्य बाबींवरील खर्च” या विषयावरील राज्य नमुन्यात गोळा करण्यात आलेल्या आकडेवारीवर आधारित अहवालाचा सारांश**

**१. प्रस्तावना :-** भारत सरकारची राष्ट्रीय नमुना पाहणी (रा.न.पा.) संघटना नियमितपणे राष्ट्रव्यापी सामाजिक व आर्थिक पाहण्या घेत असते. त्यात महाराष्ट्र शासनाचा अनुरूप नमुना तत्वावर सहभाग आहे. रा.न.पा संघटनेच्या नियामक परिषदेने वेळोवेळी घेतलेल्या निर्णयानुसार ‘कुटुंबाचा उपभोग्य बाबींवरील खर्च’ आणि ‘रोजगार व बेरोजगार’ या दोन विषयावर मोठा नमुना आकार घेवून एकत्रितपणे दर पाच वर्षांनी पाहणी घेण्याचे ठरविण्यात आले होते. त्यानुसार रा.न.पा. ५५ वी फेरी (जुलै, १९९९- जून, २०००) मधील पाहणी ही अशा प्रकारची सहावी पाहणी होती. तर रा.न.पा. फेरी क्र. ४२ पासून ‘कुटुंबाचा उपभोग्य बाबींवरील खर्च’ या विषयावर दरवर्षी लहान नमुना आकारामध्ये पाहणी घेण्याचे ठरविण्यात आले होते. त्यानुसार रा.न.पा. ५९ वी फेरी (जानेवारी-डिसेंबर, २००३) ही अशा प्रकारची पंधरावी फेरी होती. हा अहवाल रा.न.पा.च्या ५९ व्या फेरीतील पत्रक १.० ‘कुटुंबाचा उपभोग्य बाबींवरील खर्च’ या विषयावर आधारित आहे. या अहवालात कुटुंबाच्या उपभोग्य बाबींवरील खर्चाच्या निष्कर्षांबरोबर रोजगार व बेरोजगारीच्या दराबाबतचा देखील उहापोह करण्यात आला आहे.

**२. नमुना आकार :-** या पाहणीसाठी ५२३ गावातील २०८९ कुटुंबे व ५३१ नागरी घटकातील २१०६ कुटुंबे अशा एकूण ४१९५ कुटुंबांकडून माहिती गोळा करण्यात आली होती.

**३. महत्वाचे निष्कर्ष :-** या पाहणीमध्ये गोळा केलेल्या माहितीचे तपशीलवार विश्लेषण करून प्राप्त झालेले निष्कर्ष पुढे दिले आहेत.

**३.१ कुटुंबाचा आकार उपभोग्य बाबींवरील दरडोई खर्च व वापर**

कुटुंबाचा राहणीमानाचा दर्जा अभ्यासण्यासाठी ‘दरडोई खर्च’ ही अतिशय महत्वाची संकल्पना आहे. त्यानुसार कुटुंबाचा उपभोग्य बाबींवरील खर्चाच्या गोळा केलेल्या आकडेवारीचे विश्लेषण केले असता महाराष्ट्र राज्याकरिता दरडोई मासिक सरासरी खर्च रु.७९७/- असल्याचे आढळून आले. ग्रामीण व नागरी भागातील कुटुंबाचा हा खर्च अनुक्रमे रु. ५९३/- व रु. ११२३/- असल्याचे निदर्शनास आले. दरडोई मासिक खर्चाच्या वर्गानुसार ग्रामीण भागात ५६ टक्के कुटुंबातील ६३ टक्के व्यक्तींचा खर्च सरासरी खर्चापेक्षा कमी असून नागरी भागात हे प्रमाण ५३ टक्के कुटुंबे व ६५ टक्के व्यक्ती इतके असल्याचे आढळले. ग्रामीण व नागरी भागाकरिता प्रती कुटुंब व्यक्तींची सरासरी संख्या अनुक्रमे ४.७१ व ४.४१ असल्याचे दिसून आले. तसेच राज्यातील ग्रामीण व नागरी या दोन्ही भागात

वाढत्या दरडोई मासिक खर्च वर्गानुसार कुटुंबाचा आकार कमी कमी होत असल्याचेही निदर्शनास आले. राज्याच्या ग्रामीण भागातील कुटुंबाने उपभोग्य बाबींवर केलेल्या एकूण खर्चापैकी खाद्यपदार्थ व खाद्येतर पदार्थांवर केलेला खर्च अनुक्रमे रु. २९७ व रु. २९६ असल्याचे आढळले तर नागरी भागासाठी हा खर्च अनुक्रमे रु. ४६४ व रु. ६५९ असल्याचे दिसून आले. खाद्यपदार्थांवर होणा-या एकूण खर्चापैकी ग्रामीण भागात तृणधान्ये, भाजीपाला, खाद्यतेल व दूध व दुग्ध पदार्थ तर नागरी भागात तृणधान्ये, पेये व अल्पाहार, दूध व दुग्धपदार्थ आणि भाजीपाला इत्यादी खाद्यपदार्थांवर जास्त खर्च होत असल्याचे आढळले. तर खाद्येतर पदार्थांवर होणा-या खर्चापैकी ग्रामीण व नागरी या दोन्ही भागात संकिर्ण वस्तू व सेवा यावरील झालेल्या खर्चाचा हिस्सा जास्त असल्याचे दिसून आले. तथापि, नागरी भागाच्या तुलनेत ग्रामीण भागात खाद्यपदार्थांवर झालेल्या खर्चाची टक्केवारी जास्त होती तर खाद्येतर पदार्थांवरील खर्च ग्रामीण भागाच्या तुलनेत नागरी भागात महत्तम असल्याने आढळून आले. राज्यात खाद्यपदार्थांवर झालेल्या खर्चापैकी तृणधान्यावर अधिक खर्च केल्याचे दिसून आले. तृणधान्यावरील दरडोई वापर व खर्चाच्या आकडेवारीवरून ग्रामीण व नागरी या दोन्ही भागातील कुटुंबाचे ‘गहू’ हे प्रमुख तृणधान्य असल्याचे आढळले व गव्हावरील दरडोई मासिक वापर व खर्च ग्रामीण भागासाठी अनुक्रमे ३.३२ कि.ग्रॅ. व रु. २७.४४ तसेच नागरी भागासाठी अनुक्रमे ४.४७ कि.ग्रॅ. व रु. ४७.३४ असल्याने निदर्शनास आले. वापराच्या मूल्य व परिमाण आकडेवारीवरून काढण्यात आलेल्या विविध तृणधान्यांच्या सरासरी किंमतीवरून ग्रामीण व नागरी या दोन्ही भागात ‘तांदूळ’ हा किंमतीने महाग तर ‘बाजरी’ ही स्वस्त तृणधान्य असल्याचे आढळले. ग्रामीण भागातील तृणधान्यांच्या किंमतीच्या तुलनेत नागरी भागातील तृणधान्यांच्या किंमती १६ ते ३० टक्क्यांनी जास्त असल्याचेही दिसून आले.

**३.२ घराची मालकी व संरचना**

मानवाच्या अन्न, वस्त्र, निवारा या तीन प्रमुख गरजा असून त्यावरूनच राहणीमानाचा दर्जा ठरविता येतो. पाहणीत गोळा केलेल्या घराच्या आकडेवारीचा अभ्यास करतांना ग्रामीण व नागरी या दोन्ही भागात पक्क्या घरात राहणा-या कुटुंबाचे प्रमाण जास्त असल्याचे आढळले. तर ‘स्वतंत्र घर’ असणारी कुटुंबे ग्रामीण भागात विपुल (८० टक्के) प्रमाणात आढळली. राज्यातील ग्रामीण व नागरी या दोन्ही भागात स्वमालकीची घरे असणा-या कुटुंबांची संख्या लक्षणीय होती, तर भाड्याच्या घरात राहणारी कुटुंबे नागरी भागात ग्रामीण भागाच्या तुलनेत जास्त असल्याचेही निदर्शनास आले.

### ३.३ स्वयंपाक व प्रकाशासाठी प्राथमिक उर्जास्रोत

सध्याच्या युगात 'उर्जा' हा परवलीचा शब्द झाला आहे. या पाहणीमध्ये कुटुंबाने स्वयंपाक व प्रकाशयोजनेसाठी वापरलेल्या प्राथमिक उर्जास्रोताबाबत आकडेवारी गोळा करण्यात आली. त्यानुसार ग्रामीण भागात स्वयंपाकासाठी 'जळाऊ लाकूड' हा प्राथमिक उर्जास्रोत वापरणा-या कुटुंबाची टक्केवारी सर्वात जास्त (७६ टक्के) असून त्याखालोखाल गॅस व घासलेट वापरणा-या कुटुंबांची टक्केवारी असल्याचे आढळले. तथापि, नागरी भागातील ६३ टक्के कुटुंबे मात्र प्राथमिक उर्जास्रोत म्हणून 'गॅस' चा महत्तम वापर करीत असल्याचे आढळून आले असून त्याखालोखाल घासलेट व जळाऊ लाकूड वापरत असल्याचे दिसून आले. प्रकाशासाठी ग्रामीण भागात ७९ टक्के कुटुंबे तर नागरी भागात ९७ टक्के कुटुंबे 'बीज' या प्राथमिक उर्जास्रोताचा वापर करीत असल्याचे दिसून आले असून ग्रामीण भागातील २१ टक्के कुटुंबे अजूनही घासलेटचा वापर करीत असल्याचे आढळून आले आहे.

### ३.४ रोजगारीत व बेरोजगारीत व्यक्तींची स्थिती

मुख्य कार्यस्थितीनुसार राज्यातील रोजगारीत व्यक्तींचा अभ्यास करतांना जुलै, २००० ते डिसेंबर, २००३ या कालावधीत ग्रामीण व नागरी या दोन्ही भागातील रोजगारीत पुरुषांच्या टक्केवारीत वाढ झाल्याचे दिसून आले. तथापि, रोजगारीत स्त्रियांच्या बाबतीत मात्र याच कालावधीत कमी अधिक प्रमाणात वाढ झाल्याचे आढळले. ग्रामीण व नागरी भागातील रोजगारीत पुरुषांची टक्केवारी अनुक्रमे ५७ व ५५ असल्याचे निदर्शनास आले. चालू आठवड्याच्या स्थितीनुसार सुद्धा ग्रामीण व नागरी या दोन्ही भागात रोजगारीत पुरुषांमध्ये चढता कल आढळला. कुटुंबाच्या प्रकाराचे वर्गीकरण करतांना ग्रामीण भागातील रोजगारीत व्यक्तींपैकी अर्धी लोकसंख्या स्वयंरोजगारीत तर नियमित वेतनावरील नैमित्तिक मजुरांची टक्केवारी अनुक्रमे १० व ३ असल्याचे आढळले. त्याहीपुढे नागरी भागाच्या तुलनेत ग्रामीण भागात स्वयंरोजगारीत व्यक्तींची टक्केवारी अधिक होती. बेरोजगारीत व्यक्तींचा विचार करतांना ग्रामीण भागाच्या तुलनेत नागरी भागात बेरोजगारीचा दर (श्रमशक्तीतील बेरोजगारीत व्यक्तींची दर हजारी संख्या) जास्त असल्याचे निदर्शनास आले.
